

Welcome to the Animal Kingdom! We hope you learn so much in these lessons!

Jigsaw Puzzle

What animal is hiding in this picture?

Create the puzzle and describe the animal.

Describing the Panda

Use adjectives to describe the picture. What can you see?

Today we are learning to:

- Read an interesting story
- Create pictures to tell the story
- Use adjectives and adverbs
- Review ck sounds

Lets
read a
story

Eggs and Baby Birds

Anne Shirley

Eggs and Baby Birds

All birds lay eggs.

The eggs are where baby birds grow until they hatch.

Most birds lay their eggs in nests.

Why Do Birds Build Nests?

Birds build nests to:

- Protect the eggs from enemies.
- Keep the eggs in one place so that the birds can sit on them and keep them warm.
- Keep the eggs warm when the parent birds are away.
- Protect the baby birds when they hatch.

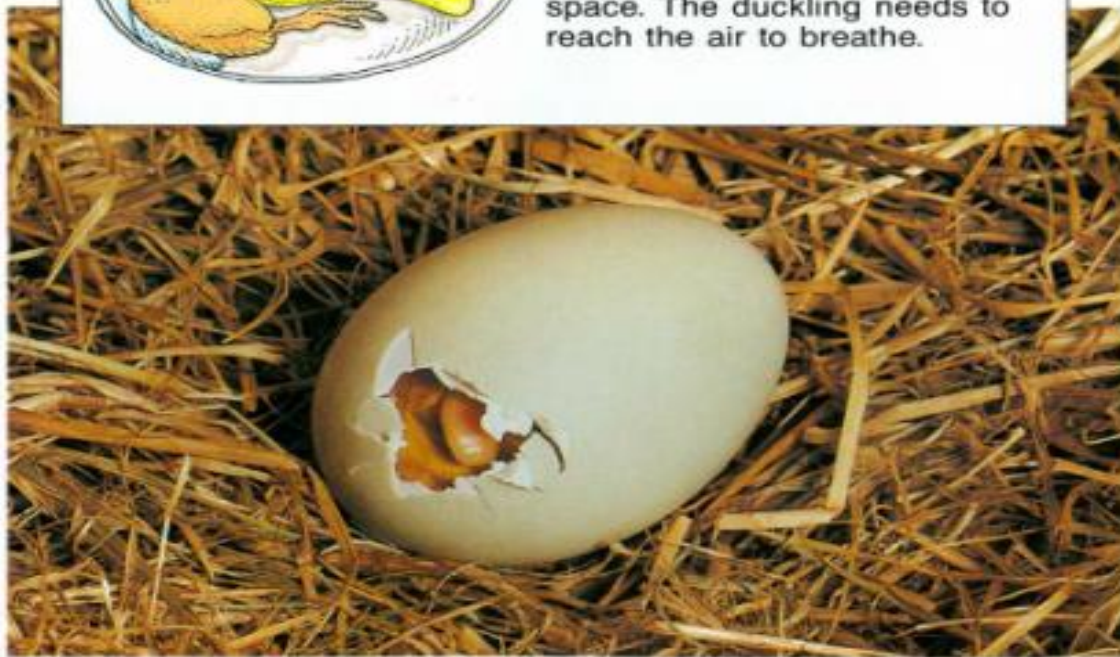

Hatching

It takes a lot of time and hard work for a baby bird, like a duckling, to hatch.

Before it hatches, the duckling turns so that its beak points towards the round end of the egg where there is an air space. The duckling needs to reach the air to breathe.

The duckling breaks through the shell using its "egg tooth". The egg tooth is a sharp bump on the duckling's beak. It falls off after the duckling hatches.

The duckling cuts a circle all around the shell.

The duckling then pushes the shell apart and tumbles out. The duckling has hatched!

Baby Birds

Look at these song thrush chicks.
They are born very helpless.
They grow very quickly in the nest.
When they hatch, song thrush
baby birds have no feathers.
Their eyes are not open.

These song thrush baby birds are begging for food from their parents. They have brightly coloured mouths so that their parents can see them. They have small feathers.

These nine-day-old song thrush baby birds are growing feathers.

These thirteen-day-old song thrush baby birds are covered with feathers. They are fledged. The baby birds will leave the nest in the next five days.

Look at these baby birds.
They are covered with soft fluffy
down feathers when they hatch.
Their eyes are open and they can
find food for themselves.

Look at these baby birds.
They are covered with soft fluffy feathers
when they hatch.
Their eyes are open and they can find
food for themselves.

Some birds build their nests on the
ground.

This nest was built by a malleefowl.
It is a huge mound of soil, leaves and
small sticks.

Checking for understanding

What are three new things that you have learned about birds and nests?

1. _____
2. _____
3. _____

CREATING CONNECTIONS TO THE WORLD

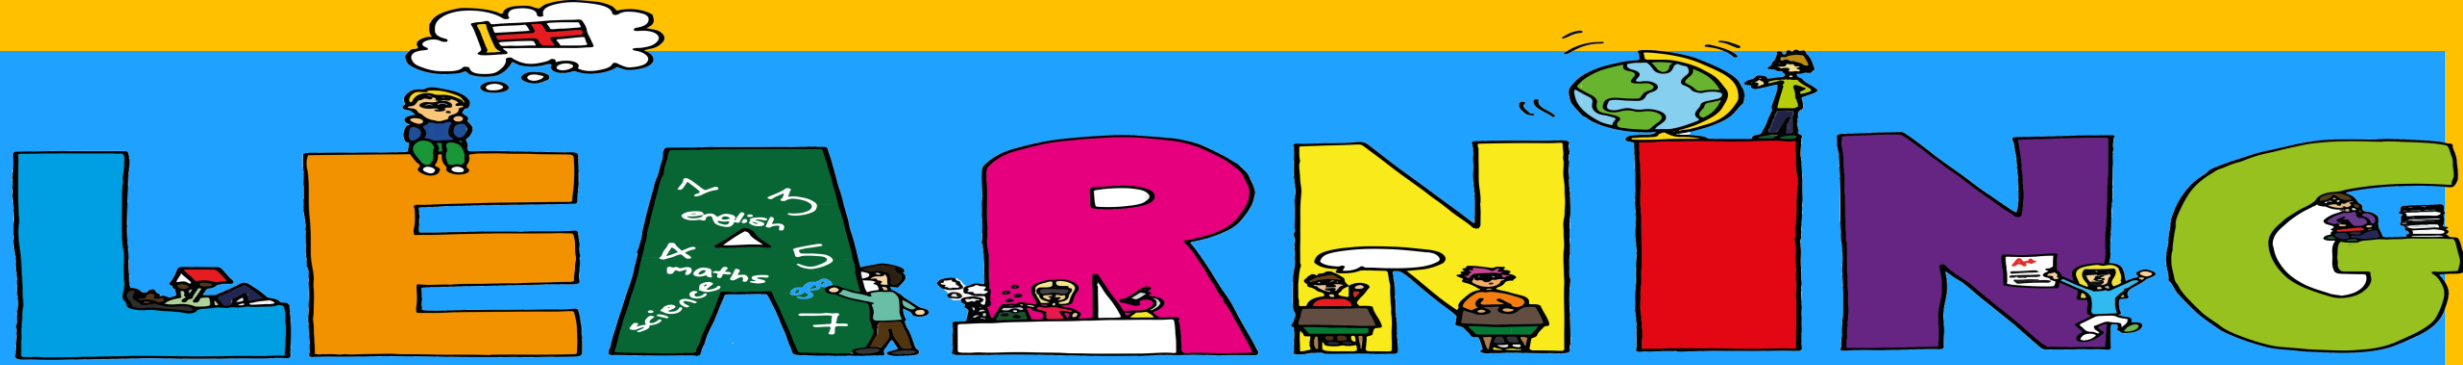

Have you been to the Zoo?
Which birds have you seen?

Describe the your favourite bird:

Whose Baby Bird?

Can you tell which baby bird belongs to which parent?

Today we are learning to:

- Read an interesting story
- Create pictures to tell the story
- Use adjectives and adverbs
- Review ck sounds

**LEARNING
OUR WORDS!**

**What words can you think
of that have the 'ck' sound?
Lets make a list!**

ck

ck

ck

ck

**Write a funny/interesting
sentence using two or more
'ck' words.**

**Draw a picture about your
sentence.**

Today we are learning to:

- Read an interesting story
- Create pictures to tell the story
- Use adjectives and adverbs
- Review ck sounds

HOMework

- Using the reading about birds and nests to create pictures.
- Creating sentences using the new 'ck' words

What did you find really interesting in the reading about eggs and baby birds?

Describe one of the eggs you
saw in the reading.

Which bird laid that egg?

New Reading Vocabulary

fairy

pear

lay

hatch

nest

enemy

parent

river

soil

leaf
